

**APPENDIX 1**  
**UNIVERSITY COURSE REGISTRATION RULES AND REGULATIONS**  
(For Use in ECON485 Homework Scenario)

## **1. Introduction**

This document outlines the official rules and regulations governing course registration at the University. It covers academic structures, course types, enrollment procedures, restrictions, and student responsibilities. The University aims to provide a consistent, transparent, and fair registration system that supports academic integrity and ensures proper sequencing of courses throughout students' academic careers.

The regulations in this document are modeled after policies commonly found in Turkish higher education institutions with English-language academic catalogs. The purpose is to establish a clear, comprehensive framework that students, academic advisors, and administrative units can rely on during registration, add/drop, and withdrawal processes.

## **2. Academic Structure and Course Definitions**

### **2.1 Course Definition**

A course is an instructional unit offered by an academic department. Each course has:

- A course code (e.g., ECON 211, MATH 102)
- A course title (e.g., “Principles of Microeconomics”)
- A credit value (local credits and ECTS)
- A delivery mode (in-person, online, or hybrid)
- A syllabus approved by the relevant departmental and university committees

Courses may include lectures, laboratory work, recitation hours, group projects, and exams.

### **2.2 Course Sections**

Each course may be offered in one or more sections in a given semester. Each section is identified by a section number (e.g., ECON 211-01, ECON 211-02) and includes:

- Instructor(s) or teaching assistants
- Meeting days and times
- Assigned classroom or online meeting link
- Maximum enrollment capacity

Sections with different instructors may cover the same content but may have distinct evaluation policies.

## 2.3 Cross-Listed and Joint Courses

Some courses may be designated as cross-listed or jointly offered:

### Cross-listed Courses

A course may appear under multiple departments (e.g., ECON 410, MATH 410, and STAT 410).

All cross-listed versions refer to the same physical class meeting and share:

- Identical syllabus
- Same instructor(s)
- Shared classroom and schedule
- A single combined enrollment capacity

Students may register under only one of the cross-listed codes. After registration, the grade earned is recorded under the specific code selected by the student.

### Joint Courses

Departments may collaborate to offer a course under a joint course code (e.g., ENGR 300 / COMP 300). Such courses share all instructional resources. Students from either department may register without requiring special permissions.

### Course Equivalence and Restrictions

If two courses are declared “equivalent” or “mutually exclusive,” students cannot receive credit for both. In such cases, only one course will count toward graduation requirements even if both are taken.

## 3. Course Enrollment Policies

### 3.1 Registration Eligibility

A student may register for courses only if:

- Their student status is “active.”
- They have no outstanding disciplinary suspension for the relevant period.
- They have completed academic advising for the semester (if required).
- They do not have financial restrictions on their student account.

### 3.2 Registration Credit Limits

Registration credit limits per semester are based on institutional policy and cumulative GPA:

- Standard Load: 30 ECTS (or equivalent in local credits)
- Minimum Load: 20 ECTS (except for final-semester students)

Overload Permission: Students with a CGPA  $\geq 3.00$  may request up to 40 ECTS, subject to advisor approval.

The University reserves the right to modify these limits according to program needs.

### 3.3 Time Conflicts

A student may not register for two sections whose meeting times partially or fully overlap, unless:

- The conflict is minor ( $\leq 10$  minutes overlap) and
- Both instructors approve the conflict in writing

Without approvals, the system automatically blocks registration.

## 4. Prerequisites, Co-Requisites, and Mutually Exclusive Courses

### 4.1 Prerequisites

A prerequisite is a course that must be completed before enrolling in another course. Each course may have zero, one, or multiple prerequisites. Prerequisites must be completed with a minimum grade specified by the department (e.g., at least C) unless otherwise stated.

The registration system checks prerequisites automatically.

Students cannot register if:

- A required prerequisite is missing
- The student failed the prerequisite
- The student withdrew from the prerequisite (grade “W”)
- The grade is below the minimum threshold

Some departments allow conditional registration (e.g., if the prerequisite is “in progress”) but may require the student to drop the course automatically if the prerequisite is not passed.

### 4.2 Co-Requisites

A co-requisite is a course that must be taken in the same semester. Example: CHEM 101 (lecture) and CHEM 101L (lab) may be co-requisites.

Rules:

- Students must register for both courses simultaneously.
- Dropping one course forces automatic dropping of the co-requisite unless special permission is granted.

## 4.3 Mutually Exclusive Courses

Two courses may be marked as mutually exclusive due to overlapping content. Students may NOT receive credit for both courses. If both are taken, only the first successfully completed course counts. The system will block registration for the second course unless an override is granted by the department.

Examples:

- STAT 201 and ECON 207
- COMP 101 and MIS 105

## 4.4 Departmental Overrides

Students may request special permission to waive prerequisites, co-requisites, or mutual exclusion rules. Requests must include justification.

Approval may be granted by:

- Instructor
- Undergraduate program coordinator
- Department chair

Overrides are stored in the system with date and approver name.

# 5. Repeats, Failed Courses, and Grade Replacement

## 5.1 Failed Courses

A course is considered failed if the final grade is:

- F
- FX (failure due to exam absence)
- U (unsatisfactory in pass/fail course)

A failed course must be repeated in the next available semester if it is part of:

- The student's major program
- The common core curriculum
- Required courses for graduation

## 5.2 Repeating Courses

Students may repeat a course to:

- Replace a failing grade
- Improve a low passing grade (e.g., a D or C-)

Rules:

- All attempts remain visible on the transcript.
- Only the latest passing grade is included in the CGPA calculation.
- Course credits are counted only once toward graduation requirements.
- Some courses may restrict the number of repeat attempts (e.g., no more than 3 attempts).

## 5.3 Grade Replacement Policy

For repeated courses:

- If a student fails again, the new failing grade replaces the old grade in GPA calculations.
- If a student passes, the latest passing grade replaces the previous grade(s).
- Historical attempts still appear but marked as “repeated—excluded from GPA.”

Departments may impose additional rules, such as:

- Students with more than two failed core courses may receive academic probation.
- Students may be required to retake certain prerequisite chains (e.g., MATH 101 → MATH 102 → MATH 201) in strict order.

## 5.4 Course Replacement

If a required course is discontinued:

- The department may designate a newer course as a replacement.
- Past students who took the old course may not be required to take the new one.
- Students who have not yet taken the old course must take the replacement course.

# 6. Add, Drop, and Withdrawal Policies

## 6.1 Add/Drop Period

The Add/Drop Period occurs during Weeks 1 and 2 of the semester. During this period:

- Students may freely add, drop, or change sections.
- Dropped courses do not appear on the transcript.

No approvals are required unless:

- Course has restrictions
- Instructor consent is mandatory

Time conflicts exist.

Add/drop actions are recorded internally but not included in transcript history.

## 6.2 Withdrawal Period (“W” Grades)

After the add/drop period ends, the Withdrawal Period begins. Withdrawal usually opens in Week 3 and continues until Week 10. Students may withdraw from a course by submitting a request through the Student Information System.

Rules:

- Withdrawal is indicated by “W” on the transcript.
- A “W” has no effect on GPA.

Students may not withdraw from:

- Courses they have previously failed
- Courses that are prerequisites for other courses they are taking in the same semester
- Courses in which they are under disciplinary investigation
- Courses that would reduce their credit load below the minimum required
- Departments may limit the number of withdrawals allowed across a student’s academic career.

## 6.3 Forced Withdrawal or Administrative Drop

Under certain conditions, a student may be withdrawn administratively:

- Failure to meet prerequisites discovered after registration
- Tuition payment problems
- Violation of course attendance policies
- Academic integrity sanctions

Administrative “W” or “AW” grades may be assigned depending on the reason.

## 6.4 Registration History Tracking

The system keeps a complete internal history of registration actions, including:

- Add attempts
- Drop attempts
- Withdrawal requests
- Forced withdrawals
- Section changes
- Overrides
- Time conflict approvals

This history is not publicly visible but is essential for audits and appeals.

## **7. Additional Policies**

### **7.1 Registration Priority**

Priority rules may determine who registers first:

- Senior students (4th-year) register before juniors
- Students with disabilities may have early registration
- Athletes or scholarship students may receive priority slots
- Exchange students may register after degree students or in special windows

### **7.2 Enforced Sequencing**

Programs may enforce strict sequencing for foundational courses such as:

- Calculus I → Calculus II
- Programming I → Programming II
- Microeconomics I → Microeconomics II

The system blocks registration if sequencing rules are violated.

### **7.3 Instructors and Teaching Assistants**

Each course section may have:

- Primary Instructor
- Co-Instructor(s)
- Teaching Assistant(s)

All instructional staff are recorded in the system with roles and responsibilities.

### **7.4 Multi-Component Courses**

A single section may require attendance in:

- Lecture meetings
- Laboratory meetings
- Recitation sessions
- Project studios

Each component may be assigned to different rooms and staff members, requiring detailed schedule modeling.

## **8. Student Responsibilities**

Students are responsible for:

- Following all published academic rules
- Meeting with their academic advisor for guidance

- Monitoring prerequisite and graduation requirements
- Ensuring compliance with course sequencing
- Managing their add/drop and withdrawal actions
- Checking their transcript and registration status regularly
- Completing graduation checks before their final semester
- Failure to comply with regulations does not exempt students from academic obligations.

## **9. Administrative Oversight**

The enforcement of registration rules is handled by:

- Registrar's Office
- Department Chairs
- Program Coordinators
- Faculty/School Administrative Boards
- Academic Advising Units

These units may update or refine rules as needed.

## **10. Amendments and Updates**

The University reserves the right to modify these regulations:

- At the beginning of any academic year
- In response to regulatory changes by the Council of Higher Education (YÖK)
- For alignment with Bologna/EHEA standards
- Upon recommendation of the Senate or Faculty Boards

Students are notified of amendments through official channels.
